

Box and Pan Folding Machine

Model 2500 x 2

Description

The hydraulically powered Box and Pan Folder makes clamping, bending and folding of galvanised mild steel both effortless and quick.

This versatile machine is easy to set up and easy to use. The folding machine supports the work piece during the process, making the process easier, safer and less tiring for the operator to use. The angle of bend stop and the rise of the top beam are also adjustable for different materials and radius bends.

Our robust design provides high resistance to deflection resulting in accurate and consistent repeat bends and fast clamping and folding means it is suitable for short run prototype work but is equally efficient on high run work.

Features

- 2mm galvanized mild steel capacity
- Hydraulic power clamping and folding
- Adjustable angle of bend stop
- Rise of top beam is adjustable for safety
- Emergency Stop and Safety Key Switch
- Requires no time consuming set up or operators skills
- Able to fold complex parts without multiple handling
- Design features mean safer and less tiring work for operator
- Easy to use controls provide fast clamping and folding
